

Getting Started

Before you begin using your hosting service, let's go over what you need:

What You Need to Get Started

- **A Registered Domain Name**

This is your website address (e.g., yourbrand.com). If you haven't purchased one yet, you can register it through domain registrars like GoDaddy, Namecheap, or Google Domains.

- **Access to Your Domain Registrar Account**

You'll need to log in to your registrar to update the nameservers (which connects your domain to your hosting account).

- **SiteDeploy Hosting Login Details**

After purchasing your hosting plan, you should receive a welcome email from SiteDeploy with your cPanel login credentials.

Once you have all three, you're ready to move forward with the setup!
